INSTITUTION-GOVERNED · AUDIT-NATIVE · NON-CUSTODIAL

The Control Plane for Institutional Digital Assets.

Aetherum connects institutional identity, policy enforcement, transaction authorization, controlled execution, and audit-native evidence for credit unions and community banks deploying digital-asset lending, tokenization, payments, and settlement — without replacing their core systems.

28	6	No
USPTO APPLICATIONS FILED	NEW CONTROL-LAYER FILINGS	CORE REPLACEMENT REQUIRED

01 · PROBLEM

Members already own digital assets. Their credit union has no governed way to serve them.

01 Digital-asset value sits outside the member relationship, creating deposit flight and lost lending opportunity.

02 Existing core systems were not built for crypto collateral, wallet permissions, stablecoins, or on-chain audit records.

03 Consumer crypto tools do not satisfy credit-union governance, examiner, risk, and compliance requirements.

04 Most vendors solve custody, trading, or payments. Credit unions need institutional control across the whole workflow.

02 · PLATFORM

Aetherum is the institutional digital-asset control plane across identity, governance, execution, and evidence.

LENDING

Crypto-Collateralized Credit

Members borrow against eligible digital assets while the credit union remains lender, relationship owner, and policy authority.

MONEY MOVEMENT

Stablecoin & Payment Rails

Stablecoin disbursement, settlement, recurring workflow support, and payment connectivity under institution-defined controls.

GOVERNANCE

Audit-Native Compliance

Identity, authorization, risk decisions, policy outcomes, and transaction evidence are preserved for review from day one.

03 · DIFFERENTIATION

The new Aetherum stack: Identity → Policy → TxGuard → Modular Execution.

1

Identity V4

Resolves the institution and governed member relationship that applies before a regulated digital-asset operation proceeds.

2

Policy / Asset Controls

Defines which assets, operation types, limits, and policy conditions are permitted for each institution.

3

TxGuard

Evaluates required controls before value moves and preserves explicit authorization evidence.

4

Modular Smart Accounts

Applies bounded, revocable, institution-governed permissions to ERC-7579-compatible account workflows.

A complete product layer around the member, the asset, the transaction, and the examiner.

DACS

Dynamic Asset Credit Score

Risk-based LTV, collateral scoring, tax-position intelligence, and explainable underwriting.

PATENT PENDING

WALLETS

Non-Custodial Wallet Infrastructure

Member-controlled wallet experiences with institution-governed permissions and policy context.

NON-CUSTODIAL

STABLECOINS

Disbursement & Settlement

Stablecoin money movement across supported rails with compliance and servicing controls.

MULTI-RAIL

TOKENIZATION

Governed Tokenization Control Plane

Institution-authorized asset state flows into ERC-7943-based on-chain lifecycle controls, reconciliation, and examiner-

PARTICIPATION TOKENS

Compliance-Gated Digital Participation

Institution-scoped token representations carry eligibility, lifecycle restrictions, and separated administrative authority into the

STAFF TOOLS

CU Operations Portal

Loan officer, compliance, member-management, risk, and examiner-facing operational workflows.

PILOT READY

05 · COMPLIANCE

Non-custodial should not mean ungoverned.

Aetherum separates asset custody from institutional governance. The member can control the wallet while the credit union retains policy, authorization, risk, and audit control around the financial workflow.

FAIL-CLOSED

Required controls stop execution when unresolved.

Uncertainty does not silently become permission.

EXAMINER-READY

Every material decision is reconstructable.

Policy context, decision outcome, and transaction evidence are preserved.

INSTITUTION-OWNED

CU policy remains the governing source.

The rail can change while institutional control remains legible.

06 · MARKET

Credit unions and community banks need digital-asset capabilities without surrendering institutional control.

WHO WE SERVE

Credit Unions, Community Banks & CUSOs

Community-based institutions that want digital-asset products without core replacement or custody reinvention.

INITIAL WEDGE

Crypto-Collateralized Lending

A high-value member need that connects digital assets directly to credit-union lending economics.

EXPANSION

Payments, Stablecoins & Tokenized Credit

Once the control plane is installed, additional digital-asset workflows can operate under the same governance layer.

07 · TRACTION

Built around a growing IP portfolio, working integrations, and partner-led distribution.

IP

28 USPTO-Filed Applications

Lending, identity, policy controls, TxGuard, modular smart accounts, governed tokenization, compliance-gated participation tokens, audit evidence, and stablecoin workflows.

BUILD

Demo Stack Live

Digital-asset lending, wallet, settlement, compliance, and staff workflows demonstrated in the operating product.

RAILS

Stablecoin / OMS Path

Non-custodial wallet and stablecoin money movement strategy aligned around Polygon OMS and related rails.

PARTNERS

CU Ecosystem Focus

Positioned for pilots through CU, CUSO, league, and fintech implementation partners.

08 · ROLLOUT

A disciplined pilot path: prove one workflow, then expand the control plane.

1

Pilot CU

Configure lending, wallet, policy, and audit workflow for one forward-leaning institution.

2

Member Launch

Start with governed crypto-collateralized lending and staff review workflows.

3

Rail Expansion

Add stablecoin disbursement, card/merchant spend, and recurring workflow support.

4

Network Scale

Package the implementation model for CUSO, partner, and credit-union network distribution.

FINANCING ASK · $1.0M raise at a $16.0M post-money valuation · 20% discount · Proceeds support first-pilot execution, compliance infrastructure, partner integration, and controlled credit-union expansion.

Built by operators. Advised by the ecosystem.

John Bailey

FOUNDER & CEO

20+ years in technical recruiting with placements at Google, Spotify, and Goldman Sachs. Previously co-founded Thorium Data. Building Aetherum full-time since early 2025 — product, business development, fundraising, and technical implementation.

Steve Salzer

BOARD ADVISOR · SVP, VELERA

SVP at Velera since 2017. Chairs the Board of Managers at Ongoing Operations LLC. NACUSO Regulatory Advocacy Committee and CUNA Payments Subcommittee. JD, University of Chicago Law School.

Rahul Goel

ADVISOR · JP MORGAN / UBER

Cybersecurity and financial-infrastructure expertise from senior roles at JP Morgan and Uber, including involvement with Meta's Novi digital wallet. Advises on platform security and institutional trust.

Saiprasad Raut

ADVISOR · WORLDPAY / VANAR

Head of Payments Infrastructure at Vanar, formerly Worldpay. Deep payments and blockchain-infrastructure expertise guiding settlement and digital-asset architecture.

10 · THE ASK

The ask: fund the first governed credit-union digital-asset pilot.

Aetherum is raising **$1.0M at a $16.0M post-money valuation, with a 20% discount**, to convert its built product stack, 28-patent portfolio, and credit-union positioning into a live institutional pilot and repeatable distribution model. Proceeds support pilot execution, compliance infrastructure, partner integration, and controlled credit-union expansion.
