— 01 · THE PLATFORM

One institutional platform. *Multiple financial applications.*

> *Aetherum is the orchestration and control layer for credit-union digital-asset financial services — connecting lending, payments, stablecoin money movement, wallets, risk, and compliance without replacing the core or the member relationship.*

FOUNDATIONAL PLATFORM

Core Governance & Evidence

Institution-scoped identity, policy evaluation, pre-execution authorization, and linked audit evidence form the common platform.

APPLICATION MODULE

Stablecoin Payments & Settlement

Orchestrate approved money movement through supported providers, with institutional approvals, transaction status, exception handling, and reconciliation.

APPLICATION MODULE

DACS Lending & Collateral Risk

Support institution-originated lending with collateral risk assessment, LTV controls, and officer review. The institution remains the lender and decision authority.

SCOPED DEPLOYMENT

Governed Tokenization

Institution-authorized asset lifecycle controls and evidence. Commercial deployment follows a funded use case and readiness review.

SUPPORTED INTEGRATIONS

Provider-Neutral Orchestration

Connect institutional decisions to supported wallets and financial networks. Execution providers retain their contracted responsibilities.

SOFTWARE INFRASTRUCTURE

Institution-Owned Authority

The institution retains the product, customer relationship, policies, approvals, and authoritative financial records.

02 · DACS

A *risk assessment model* built for crypto collateral.

DACS quantifies a borrower's position beyond traditional metrics — in language the member can actually understand. Twelve pillars of crypto risk assessment, part of a company portfolio of 28 filed patent applications, with a plain-language explanation behind every decision. Not a number on a screen; the reasoning behind it.

SEE THE 12 PILLARS →

02 · DACS — THE TWELVE PILLARS

1 Wallet Age on-chain longevity	**2** Diversification portfolio spread	**3** On-Chain Activity active management	**4** Volatility collateral resilience
5 Tax-Position Score TPSOE · patent pending	**6** TAM Bonus verified holdings	**7** On-Chain Identity CUMember · patent pending	**8** Privacy Computation FHE-DACS · patent pending
9 Dynamic LTV DACS-LTV · patent pending	**10** Ledger Collateral Control patent pending	**11** XLS-66 LoanBroker patent pending	**12** Key Governance & Audit patent pending

Tier 1 members access up to 70% LTV, Tier 2 up to 65%, Tier 3 up to 55% — enforced at the blockchain layer, under institution-defined supervisory controls.

03 · INSTITUTIONAL CONTROLS

Institution-owned authority. *Enforced before execution.*

Identity & Authority

Institution-scoped identity and permissions establish the relationship relevant to a governed operation.

Policy & Asset Controls

The institution defines eligible assets, operations, limits, and conditions within supported workflows.

TxGuard

Required policy is evaluated before supported execution. Explicit outcomes preserve decision context.

Bounded Permissions

Supported wallet and smart-account workflows use limited, revocable permissions.

Separation of Duties

Policy ownership, approval authority, execution, and evidence review have defined responsibilities.

Deployment Evidence

Validate control effectiveness and provider dependencies for the specific environment.

04 · AUDIT-NATIVE INFRASTRUCTURE

Evidence linked to *the governed workflow.*

Decision Context

Preserve the institution, applicable policy, authorization outcome, and responsible actor.

Execution & Reconciliation

Connect the decision to transaction status, confirmation, reconciliation, and exceptions.

Institutional Review

Provide authorized operations, risk, and compliance teams evidence appropriate to their roles.

Diligence Scope

Review implementation evidence, security documentation, and provider responsibilities. Demonstrations do not complete vendor risk review.

— 05 · PAYMENTS, MONEY MOVEMENT & COLLATERAL OPS

Money moves. *Policy stays in control.*

PAYMENTS & MONEY MOVEMENT

Stablecoin Payments

Stablecoin disbursement and settlement across supported networks, with member-controlled wallet connectivity and regulated third-party infrastructure where required. Aetherum applies credit-union policy, compliance, servicing, and audit controls across the workflow.

DEPLOYMENT SCOPE VARIES

CARD & MERCHANT SPEND

Approved Credit to Everyday Spend

Connect institution-approved credit to card and merchant-spend workflows, creating a governed collateral → credit → card → merchant path for members.

INTEGRATION PROCESS UNDERWAY

COLLATERAL RISK

Collateral Intelligence Engine (CIE™)

Collateral monitoring, LTV evaluation, and escalation support institution-defined risk controls in the configured lending workflow.

PATENT PENDING

MONITORING

Native LTV Monitoring

Supported data feeds inform collateral risk monitoring. Coverage, freshness, and dependencies are validated for the deployment.

DEPLOYMENT SCOPE VARIES

OVERSIGHT

Liquidation Escalation

Institution-defined escalation and approval rules govern collateral actions, with evidence of the actor and decision outcome.

DEPLOYMENT SCOPE VARIES

— 06 · WHO RUNS IT

A view *for every seat* at the credit union.

LENDING

Loan Officer Portal

Review applications, assess DACS scores, manage active loans, and action margin-call alerts — purpose-built for crypto-collateralized lending.

COMPLIANCE

Compliance Officer

Siloed KYC/AML queue, sanctions monitoring, and audit-ready reporting — full visibility and control without touching operational loan data.

REGULATORY

NCUA Examiner View

Read-only audit dashboard scoped per CU. Live positions, LTV ratios, liquidation events, full BSA/AML trail. Zero custody access, zero execution permissions.

MEMBERS

Member Crypto Insights

Consent-based visibility into the assets members already own — DACS eligibility scoring and an opt-in loan pipeline. See what's invisible today.

PATENT PENDING

07 · HOW IT WORKS

Four steps. *You own the relationship.*

1

Member connects an eligible wallet or supported digital-asset account and enters the institution-governed workflow for lending, payments, or money movement.

2

Aetherum applies the credit union's product rules, identity, risk, DACS/LTV, and compliance controls and produces an explainable audit trail.

3

The credit union approves the financial product or transaction while Aetherum orchestrates the required payment, wallet, and digital-asset infrastructure.

4

Aetherum monitors the workflow, enforces institution-defined controls, manages exceptions, and records material events for servicing and examination.

Designed for supervised institutions. Aetherum operates as an orchestration and control layer. The credit union remains the regulated financial institution, product authority, and policy owner while the appropriate infrastructure handles asset and payment execution. Every material action is designed to produce examiner-ready evidence.

One governed infrastructure layer: digital-asset collateral, credit-union approval, payment and stablecoin rails, member-controlled wallets, and audit-native controls operate as parts of the same institutional workflow.

08 · INTEGRATIONS & HOW WE'RE PAID

INTEGRATION PATHS · STATUS VARIES

Jack Henry FIN
Banno sandbox path

Corelation KeyStone
Technical review path

Fiserv AppMarket
DNA platform

FIS Code Connect
IBS Open APIs

XRPL / XLS-66
RLUSD loan currency

Pharos · Circle CCTP
USDC, live testnet

Mesh
Collateral Transfer Rail

Plaid
Bank Data Connectivity

Arc Transaction Memos
On-chain audit trail attached to every disbursement. Loan ID, member identifier, and branch code travel with the USDC transfer, indexed on-chain, readable by an NCUA examiner without querying a vendor database.

Compliance Infrastructure
COMPLIANCE & FRAUD INFRASTRUCTURE

Polygon Labs · OMS + Trails
Stablecoin disbursement and settlement infrastructure, with scheduled transfers and recurring-payment workflows being extended through member-controlled wallet permissions and Aetherum policy, compliance, servicing, and audit controls.

REVENUE MODEL

01 Platform licensing fee (annual SaaS)

02 Optional Payments and DACS Lending modules

03 One-time scoped implementation and onboarding

04 Transparent usage tiers and supported API access

05 Account expansion after measured deployment value

Aetherum earns software revenue. Institutions own their financial products; fees and provider costs are defined in contract.

09 · GET IN TOUCH

Bring digital-asset financial services *into your credit union.*

Schedule a 30-minute demo.

We start with your intended outcome, then demonstrate institutional policy, authorization, supported execution, and audit evidence. Scope, provider dependencies, readiness, and operating costs are reviewed before a pilot.
